

## RTQC

# Quality Control Module for Radiotherapy

## BACKGROUND

In accordance with the latest regulatory directives, in particular the decision of **February 28, 2023** concerning quality control external radiotherapy and radiosurgery facilities.

**RTQC** offers a complete solution for automating internal quality control (**IQC**) in radiotherapy departments.

This solution is essential for **guaranteeing the accuracy and safety of treatments** involving technologies such as linear gas pedals, the CyberKnife and proton therapy.

## OUR SOLUTION

**RTQC** is a software dedicated to radiotherapy departments to maintain **high** standards of **quality** and **safety**.

- This module facilitates the acquisition and analysis of images for internal quality control, guaranteeing regular, reliable assessment of radiotherapy equipment performance.
- The module ensures that treatment devices comply with **the latest safety standards** and **meet legal requirements**.

## ADDED VALUE

- **Easy to use:** intuitive interface.
- **Automated** reporting
- **Extensive coverage:** compatible with **all** **RTH equipment**
- **Conformity:** Compliance with **ANSM standards**
- **Interoperability:** RIS/PACS integration, DICOM support
- **Real-time monitoring**
